## Modes of Operation

Dime-O-Gold can function in four modes for printing labels:

### 1. **Express**

One label at a time, Primary contact only, no user interface (except for designating History).

### 2. **Pro**

One at a time or multiple, supporting Filters, Groups, and Tagged records, Primary and Additional Contacts. Preview/Adjust list prior to printing.

### 3. **Pro as Express**

If you've purchased the Pro license, you can also run Dime-O-Gold in Express mode by using the command-line switch `/mode=Express`, thus eliminating the user interface for contact selection, and speeding up the label creation process for a single Primary contact.

### 4. **Pause**

As in number 3, but use `/mode=Pause`. In this mode, nothing is printed, rather the Dymo LabelWriter Software program remains on the screen, waiting for you to simply paste in the address. Then you can manipulate it any way you'd like and, finally, click the Print button.
