## Tips and Tricks

**Last label printed.** By default, Dymo opens to the last label template you previously printed. This is what Dime-O-Gold uses when it launches Dymo "under the hood." You can also "force" a particular label template by designating so in Dymo LabelWriter Software as follows:

1. Launch your Dymo Label software.
2. Choose Edit (at the top), then Preferences.
3. Click the Functional tab.
4. Notice (below) the option to designate a specific label as the startup label?
5. Try it out!
